

Patient on Nano and his second response to Pfizer Vaccine

[7:47 PM, 8/4/2021] Ven: This morning, I woke up with prickly feeling almost throughout my body.

But last night, I didn't have feverish feeling or anything. Quite normal.

Perhaps this is the virus or antibody being pushed out, shedding?

[7:47 PM, 8/4/2021] Ven: Next to my knee...

[7:48 PM, 8/4/2021] Ven: Some came off after my bath, just wiping by towel.

[7:51 PM, 8/4/2021] Ven: It almost had a form like a LED bulb.... I took bath, and now I wiped all off.

Is this the shedding these unvaccinated guys are talking about? They call it dangerous phase...

[7:53 PM, 8/4/2021] Ven: Thanks to M, the bloody thing is out of my system. If I put all these spikes together and add a drop of water, that could be the 1/3cc (3.3ml) vaccine dose.

I've had this before, but this... with M, is like something getting ostracized 😊😊😬

[7:54 PM, 8/4/2021] Ven: ... out of my system..

[7:55 PM, 8/4/2021] Ven: This is particularly ONLY for 2nd dose.

I guess the first dose and M produced antibodies.

2nd dose was dealt with harshly.
