

Response to the COVID-19 vaccine effects, graphene oxide and the “protein shedding”

19 October 2021

Please note that this is a living document and will be updated as needed. If the above date is more than 30 days old, please go to <http://jabresp.metadicholnano.com/> and check for an updated version.

A growing number of people are asking how will NANO SOMA help to remove the effects of the injection(s) when people have received them and the effects from the so-called shedding of what is reportedly a spike protein to the uninjected by those who have been injected. Also, the impact of graphene oxide in the jabs has become a concern.

As we consider these issues, it is worth recalling the evidence that there are Coronavirus [patents held by the Bill & Melinda Gates Foundation](#) in conjunction with DARPA and the WHO from 2018, pre-dating the COVID-19 “[Plandemic](#)” and [Event 201](#), the October 2019 planning event that modelled the events that were to be played out in 2020 and beyond. Even more important and profound is this interview by [Dr Reiner Fuellmich of Dr David Martin](#), who explains that there is a COVID patent trail leading **back to 2002!!!**, and much, much more. A backup of the interview is [at this link](#). In my opinion, this information is profoundly important as we navigate this challenging time.

The famous French virologist Luc Montagnier, the [2008 winner of the Nobel Prize in Physiology or Medicine](#) has warned that [many will die from the vaccines](#).

Further, Yolande Norris-Clark, a Canadian specialist in women’s health and a doula [recently warned of the effects](#) of the shedding upon the hormonal states of uninjected women who come into contact with those who have been injected. Yolande’s video was quickly removed from YouTube and I understand that she has since fled with her family from Canada to Mexico because of the attacks upon her family, I’m speculating because of her uncompromising, informed and articulate stand and message.

[This outstanding video](#) (backup [at this link](#)) by an Australian doctor breaks down the lies and the truth behind the COVID-19 scamdemic and the impact of the jabs, and [this video](#) shares revelations of the false data from the CDC on COVID-19 death rates, including the widespread reclassification of the cause of death.

Further, if there actually WAS a pandemic, the overall US death rate for 2020 would have shown a significant increase. It doesn’t. See the CDC table below showing total deaths from 2015 to 2020. There is **no increase in the death rate for 2020**.

CDC Math. NO MORE EXTRA DEATHS

Total Death in the United States:

| Year | Deaths | Data Source |
|------|-----------|-----------------------------------------------------------------------------------------------------------------------------------|
| 2015 | 2,712,630 | https://www.cdc.gov/nchs/data/databriefs/db267.pdf |
| 2016 | 2,744,248 | https://www.cdc.gov/nchs/data/databriefs/db293.pdf |
| 2017 | 2,813,503 | https://www.cdc.gov/nchs/data/databriefs/db328-h.pdf |
| 2018 | 2,839,205 | https://www.cdc.gov/nchs/data/databriefs/db355-h.pdf |
| 2019 | 2,855,000 | https://www.cdc.gov/nchs/nvss/vsrr/provisional-tables.htm |
| 2020 | 2,848,527 | https://www.cdc.gov/nchs/nvss/ |

It truly is a scamdemic or Plandemic – <https://freedomplatform.tv/plandemic-indoctrination-world-premiere/>

John O’Looney is an undertaker in the UK and cogently reveals the psyop in detail as it has unfolded around him [in this interview](#).

[Here is a highly competent](#) medical scientist explaining the effects of the jabs in 3 minutes, including that most people who have received them will be dead in 6 months to 5 years.

A similar and more cogent message [is shared here](#) by this prescient and blunt Catholic (frocked) anthropologist.

[This article shares](#) evidence that a batch of AstraZeneca “COVID-19 Vaccine” was manufactured on July 15, 2018, well before the Scamdemic began in January, 2020.

[This shows](#) an obviously very healthy Australian man being quarantined for a positive PCR test, a test that has absolutely no validity.

[This shares some informed views](#) of what is happening, packaged as a “call to arms” for a national Australian protest for August 21st, 2021.

Additionally, there is growing concern about the reported presence of graphene oxide in the jabs, which is claimed [will also lead to near term death](#) from the jabs, and the evidence that the so-called spike proteins are causing [blood clotting in the fine capillaries](#), leading to all manner of long-term health effects. It is important to acknowledge this context as we contemplate what is being implemented against humanity.

More and more people are becoming aware of these effects and are looking for a solution.

Can NANO SOMA help?

Firstly, please understand that neither I nor any of the companies supplying NANO SOMA nor the companies’ directors, shareholders nor employees are medical doctors and do not provide medical advice. For medical advice, please consult your medical practitioner.

Further, these products are not intended to diagnose, treat, cure or prevent any disease.

We all look at the health condition we have as being unique and special, and one that needs specific treatment. More specifically, does something that triggers the body to heal

everything that is not representing good health, trigger the body to heal my specific condition? It's how we've been taught to think about our health.

The simple answer is, when the body is prompted by NANO SOMA to trigger processes and pathways that lead to improved health.

The components of the vaccines and any shedding to/from others do not belong in our bodies, so we could expect that NANO SOMA will trigger our bodies to rid themselves of this contamination.

Is their evidence to support this?

[This brief video](#) introduces NANO SOMA and its actions.

Let's examine the so-called "**spike proteins**" that are shedding to others. If we recall our first introduction to these spike proteins, these were the proteins projecting from the SARS-COV-2 virus ostensibly responsible for COVID-19. So, when there is talk of shedding spike proteins, it is likely these are virals that carry these spike proteins.

In the in vitro studies, conducted at the behest of Dr. Palayakotai Raghavan (Raghu) to examine the effectiveness of NANO SOMA in blocking the SARS-COV-2 virus from entering the cells, [it was shown](#) that the required priming of the spike protein ("**SARS-COV-2 uses the receptor ACE2 for entry and the serine protease TMPRSS2 for S protein priming**") to enable the virus to enter the cell was blocked by NANO SOMA: "**Metadichol (NANO SOMA) inhibits SARS-COV-2 entry into host cells by inhibiting TMPRSS2. It also boosts Glutathione, a powerful antioxidant which is [known to degrade graphene oxide](#).**

Glutathione is vital in the regulation of the oxidative stress level to maintain normal cellular functions that are affected by graphene oxide. The oxidative stress in addition is also minimized as NANO SOMA endogenously increases **another powerful antioxidant, Vitamin C.**

What about the effects of the mRNA components of the vaccines? Will these be cleared?

It has been shown that NANO SOMA triggers processes and biological pathways in our body that mimic the human DNA to within 99%, with further tests currently underway to extend this understanding. This gives the body a template against which to identify all errors in and contamination of our DNA and clear it. Indeed, it is likely that use of it by child bearing women could potentially mitigate genetic birth defects.

How about the graphene oxide?

Here is some guidance from Raghu on this:

"[Biodegradability of graphene](#) and its derivatives like graphene oxide is one of the fundamental parameters determining the fate in vivo of this material. Here, two types of aqueous dispersible graphene, corresponding to single layer (SLG) and few layer graphene (FLG), devoid of either chemical functionalization or stabilizing surfactants, were subjected to biodegradation by human myeloperoxidase (hMPO) mediated catalysis."

The Pfizer vaccine contains graphene oxide. NANO SOMA expressed the MPO gene in our in vitro gene expression studies. Glutathione, a powerful antioxidant, also degrades graphene oxides, and is also produced by NANO SOMA, which is an accepted [patent claim](#) for Metadichol (NANO SOMA). That suggests that these nano materials could potentially be [removed by your body](#) when you use NANO SOMA.

And blood clotting?

[This testimonial demonstrates](#) the clearing of a major blood clot, just as expected from Raghu's research.

So, there is strong in vitro evidence to support the ability of NANO SOMA to clear direct and indirect effects of the COVID-19 vaccines.

Is there in vivo (in the body) confirmation?

There have been cases of people experiencing skin conditions (rashes, hives) as a result of being vaccinated or coming into contact with the vaccinated. In some cases, these have cleared on beginning to use NANO SOMA, others take a few days to clear.

There is also a trial being planned at a hospital in Mumbai, India, from which we hope to obtain formal in vivo confirmation of these results. We will update this guidance when those results are available.

Suggested usage protocol

If you have been vaccinated, as soon as possible after being vaccinated use 5 sprays in your mouth every 4 hours for 36 hours.

If you experience a skin reaction to the vaccine or as a result of being in contact with somebody who has been vaccinated, use 5 sprays every 4 hours until the condition is cleared.
